

Solstice [1]

New Augmented!

Solstice (CAPBF14-856i) is an early 70 day maturity bicolor and is part of the Augmented family. This makes it the highest eating quality in this maturity slot. Solstice has strong emergence and continues with a good size ear, a strong husk covered tip and exceptional tip fill. The husk itself is a nice leafy dark green. It has a quick snap for ease in picking and a short shank for packaging. Solstice's early slot allows it to work well with Nirvana and both items will build customer loyalty due to a unique bite and taste like no other sweet corn on the market today.
