Somerset (1113)

Somerset is a main to late season variety that has a nice deep copper skin and a globe shaped bulb. The bulb shape is appealing to the eye, but also provides the grower with improved yields.

Disease Ratings: A high tolerance to pink root, fusarium, and bolting.

The **Celebrate Onion Line** is a new generation of onions that are revolutionary in plant structure. This new line of onions from Crookham Company has been through an aggressive selection process to find traits desirable to the grower. Celebrate Onions have vigorous tall tops that stand out in a field. These tops create a canopy that helps protect the bulbs from damages brought on by too much direct sunlight.

In addition the tall erect tops are better suited for chemical application and provide fewer hiding spots for thrips.

Please see crookham.com for more information on the Celebrate Series of Onions.

Disease ratings defined by ISF Position Paper of May 2005. Refer to www.worldseed.org for more information.
