

sh2i FACT SHEET

Plump Plant-ability

Normal sh2

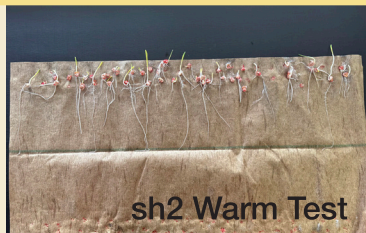

The sh2i seed is plump and does not have the jagged edges of normal sh2 seed. This accounts for approximately 28% difference in weight from the standard shrunken seed. That means improved flow-ability and plant-ability for the grower with less skips and fewer doubles.

Emergence + Vigor

sh2i Warm Test

sh2 Warm Test

sh2i Vigor Test

sh2 Vigor Test

The sh2i Series has an advantage over sh2 seed in the level of activity and performance of the seed during germination and more potential for rapid uniform emergence and development of normal seedlings under a wide range of field conditions.
